## TRS 92: Skeeters and Beyond!

1. Another rare life form has been discovered. Data on the Tilipiloes population is given below.

| Day | Population <br> (in thousands) |
| :---: | :---: |
| 0 | 2 |
| 13 | 10 |

a. Use your calculator or the Graph program (found on all FLC lab computers under the Math and Stats folder) and guess and check to find an exponential equation that models the data. Round to 2 decimals. Also, clearly define your independent and dependent variables.
b. Using your equation in part a, estimate how long it will take for the Tilipiloes population to reach ...
i. 100 thousand
ii. 1000 thousand
c. Fill in the table using your equation in part a. Round to $\mathbf{2}$ decimals.

| Day | Population <br> (in thousands) |
| :---: | :---: |
| 0 | 2 |
| 5 |  |
| 10 |  |
| 13 | 10 |
| 20 |  |

d. Researchers have just discovered a mistake! They now believe that the population of Tilipiloes is growing linearly. Use the data given initially to create a linear equation. Show your work and round to 3 decimals.
e. Fill in the table using your linear equation from part d. Round to 2 decimals.

| Day | Population <br> (in thousands) |
| :---: | :---: |
| 0 | 2 |
| 5 |  |
| 10 |  |
| 13 | 10 |
| 20 |  |

f. Graph your exponential equation from part a AND your linear equation from part d on the axes below. Don't forget to label the axes.

2. LaTonya decides to put $\$ 5000$ into a retirement account that earns $4 \%$ interest on her $25^{\text {th }}$ birthday. This makes her father to think about his retirement so he decides to put \$10,000 into an account that also earns $4 \%$ interest on his $45^{\text {th }}$ birthday. Complete the following table based on this information. Use the following variables:

Independent: $t=$ time in years the money is invested
Dependent: L = amount (\$) in LaTonya's Account, F = amount (\$) in Father's account
a.

|  | Equation (in function notation) | Amount in the <br> account at retirement <br> (age 65) | Total amount earned |
| :--- | :--- | :---: | :--- |
| LaTonya |  |  |  |
| Father |  |  |  |

b. Compare the amounts each earned and explain what makes the difference.
3. Refer back to your Day 32 Homework Part B \#1. Graph the exponential equation on the axes below.
