

Krypto Assignment

Make your own Krypto deck, suitable for use in an elementary school classroom.

Recipe: 1 – 10 (3 each), 11 – 17, (2 each), 18 – 25, (1 each).

Use index cards (any size). All the index cards should be white. The cards should not be decorated in any way. Write the number with a marker. Make the numbers as large as possible.

To play: Pick 5 cards randomly. Use these 5 numbers each exactly once, with any of the four basic operations, in order to get the target number (the 6th card drawn at random).

Practice this game at least twice (using mental math) before you come to class.

Secure your “deck” of cards with an elastic band, a plastic bag, etc.

Bring this deck to class on Wednesday, January 14th. Please have the cards in ascending order (the “ones” on top).
